Aditya Deshlahre

wymaditya@gmail.com | LinkedIn | X/Twitter | Github | LeetCode

Summary

Full-Stack Engineer specializing in web and backend performance (TypeScript, React, Go), building AI observability, native desktop, and distributed micro-service systems — optimized for 500+ concurrent users, reduced crash rates to 2% unknown, and shipped LLM-powered workflows end-to-end. Two-time Google Summer of Code mentee with a track record of open-source contributions; combine deep technical skills (MCP, AI Services & API Integration, observability tools, OpenTelemetry, LangChain/LangGraph, Electron).

Work Experience

1990 Research Lab (Software Engineer I — Hybrid) | ***Link*** | Oct 2026 - present
Solo Developer Driving AI Products *Bengaluru, India*

AgnostAI (Software Developer — Hybrid) | ***Link*** | Jul 2026 - Sep 2026
Worked with CTO/CEO directly *Bengaluru, India*

- Owned full-stack development across **telemetry**, **MCP**, **conversation intelligence**, **dashboard UX**, and **Slack workflows** for an platform.
- Designed AI observability onboarding for **OpenTelemetry**, **LangChain/LangGraph TS**, and **Spectrum TS**, enabling developers to instrument agent conversations and inspect traces in AgnostAI, cutting setup time by 60% (days to minutes).
- Implemented 4 LLM-powered workflows using **OpenAI** for **Spotlight Ask streaming**, login summaries, chat translation, and 48-hour self-improvement suggestions, automating tasks previously done manually.
- Revamped the analytics dashboard with **shadcn/Base UI** and delivered automated Slack reports, mentions, and weekly summaries for operational AI-agent insights, saving 5+ hours of manual ops work per week.

HackerRank (Software Engineering Intern — Hybrid) | ***Link*** | Jan 2026 - Jun 2026
Team Integrity - Desktop Application *Bengaluru, India*

- Developed **OS-level detection mechanisms** for **unauthorized applications** using **native Windows and macOS APIs**, catching violations in real time with **sub-second detection latency**.
- Launched a real-time crash reporting and investigation pipeline with **Sentry** for production debugging, cutting crash triage time by 65% (hours to minutes).
- Implemented native **C++** and **Swift** integrations to extend Electron with 5+ low-level platform capabilities.
- Reduced production crash rate from **7% to 2% unknown** crashes through memory leak analysis and performance optimization.

Open Source & Achievements

Google Summer Of Code'24, '25 Mentee (Remote) | ***Link*** |
OpenELIS Global *University of Washington, USA*

- Migrated legacy **MVC controllers** to **RESTful endpoints** and rewrote all **JSP pages to React**, enabling **client-side rendering** and resolving **critical edge cases** across **admin**, **test management**, and **configuration modules**, cutting **page load times** by 50%.
- Engineered form state management using **Formik** with **Yup validation** schemas; **contributed 50K+ lines of code** across **100+ commits** to the production codebase.

ClickHouse Data Warehousing | ***Link*** |
Certified Developer

- Completed ClickHouse **Data Warehousing** course (Oct 2026); applied optimized query patterns for telemetry analytics and sub-second trace inspection in production AI-observability systems. **Certified Developer**.

LeetCode (DSA) | ***Link*** |
250+ Problems Solved

- **Data Structures, Algorithms & Databases** problems solved — arrays, graphs, DP, trees, SQL/query optimization.

Form Tribe Hackathon (Remote) | ***Link*** |
FormBricks OSS *Kiel, USA*

- RunnerUp (**Guidance Guru**) — onboarded 15+ contributors during Hacktoberfest, accelerating first-time PR velocity by 40%; fixed **Account Manipulation** (3 roles, 60% attack surface reduction) + **Caching/Next.js/Role** bugs (500+ DAU, 30% cache-miss drop); patched **ProductName** validation and **Team Selection** race conditions (100+ orgs), authored on-boarding docs cutting setup from 2h to 15min (25% first-PR merge lift).

Projects

ELBAVOL: Lovable and Other AI Landing Page Generator | ***Link*** | *Personal Project*

- Architected a Lovable-clone platform using Go microservices orchestrated with Kubernetes; integrated LangChain & LangGraph for AI-driven website generation from prompts, with Kafka pub/sub for inter-service communication and Dockerized pods for deployment

Contract For Difference (Simulating Trading Platform) | ***Link*** | *Personal Project*

- Created a high-throughput trading simulation platform processing thousands of concurrent orders; deployed Kafka for event sourcing, Redis-cached order books for instant reads, and async/await for efficient resource utilization

F8F: Workflow Management Application | ***Link*** | *Personal Project*

- Built n8n-clone workflow automation tool with LangGraph-powered agentic AI; crafted visual node editor with conditional logic, state management, and intelligent email automation using AI agents

DataSheet AI (Minimal Financial AI-based spreadsheet & PDF Generator) | ***Link*** | *Personal Project*

- Created an intelligent CLI application with LLM-based conversational interface for real-time crypto/stock market analysis, automating financial data retrieval and multi-format report generation (Excel/PDF)

Education

University Of Delhi (DU) South Campus, New Delhi
B.Sc. (Hons.) Mathematics & Computing *Jul 2022 - Jul 2025*

- Cumulative GPA : **6.28/10.0**
- Relevant Coursework: JavaScript, Python, Jupyter Notebook, HTML/CSS/JS, Probability & Statistics, Maxima, Mathematica, LaTeX Language
